

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

discussed in detail and named. *Ithaginis kuseri* is from northwestern Yunnan, while *I. cruentus affinis* is proposed for the bird of southern Sikkim, as contrasted with *I. cruentus cruentus* of Nepal and northern Sikkim.—W. S.

Oliver on The Geographic Relationships of the Birds of Lord Howe, Norfolk, and the Kermadec Islands.¹—In this interesting paper Mr. Oliver discusses the relationship of the avifauna of these three islands. His conclusions are that their affinity is clearly with New Zealand rather than with Australia, while the New Caledonian element that is present leads him to endorse the theory of a land bridge between the latter island and New Zealand, of which Lord Howe was a part and Norfolk Island but slightly separated. These two islands he would regard as forming one province of the New Zealand region while the Kermadecs he thinks should form a separate province, whose fauna is derived wholly from transoceanic migration, without any of the wingless Rails or other species of Lord Howe Island which apparently date from the time of the land bridge. Mr. Oliver cites examples outside of the avifauna in support of his views but it would be interesting to see how a detailed study of other groups of animals or plants would agree with them.—W. S.

Gladstone's The Vertebrate Fauna of Dumfriesshire.²—Mr. Gladstone's beautifully printed little book furnishes us with an annotated list of the vertebrates of his native county, which while largely of local interest is also a valuable work of reference for anyone interested in Scottish zoölogy. The birds number 224 species with 39 others reported on unsatisfactory evidence. An introduction dealing with the physical features of the region under consideration and a map, are valuable adjuncts to the Catalogue.—W. S.

Horsbrugh and Davies on The Game-Birds and Water-Fowl of South Africa.³—Part 2 of this attractive work is quite up to the standard of the first number already noticed in 'The Auk.' It includes plates and text of fourteen species of Francolin and three Quail—2 *Coturnix*, 1. *Excalfactoria*—and one Button Quail, *Turnix*. The account of the breeding of the last species, the male of which incubates the eggs and cares for the young, is especially interesting.—W. S.

¹ Geographic Relationships of the Birds of Lord Howe, Norfolk and the Kermadec Islands. By W. R. B. Oliver. Trans. New Zealand Inst., Vol. XLIV, 1911, pp. 214–221. June 10, 1912.

² A Catalogue of | The Vertebrate Fauna | of | Dumfriesshire | by | Hugh S. Gladstone | M. A., F. R. S. E., F. Z. S., M. B. O. U. | Author of "The Birds of Dumfriesshire" | J. Maxwell & Son | Dumfries | 1912.

³ The Game-Birds and Water-Fowl of South Africa by Major Boyd Horsbrugh, with coloured plates by Sergeant C. G. Davies. Part 2. London, Witherby & Co. July 2nd, 1912.
